

PANEL GLIDE

BLIND SYSTEM

Vertilux's Panel Glides are available in two, three, four or five channel tracks. Offering effective light and shade control as well as UV protection across a large opening make them an ideal solution for larger windows, as a room divider and sliding doors.

Panel glides are a versatile and elegant shading option for large windows and sliding doors. Easily opened or drawn by wand control, panel glides can be stacked past a doorway or large window to allow full access and view of the outside environment.

They can be manufactured to be free-floating panels or with individual adjustment. Alternatively, the panels can be organised to follow a lead panel in sequence to open and close. Panel sizes range from 300mm to 1100mm in width.

Vertilux Panel Glides are easy to use and may be operated with either a wand or traversing cord control. Individual panels can be ordered to stack together either to the left or right, or split so that half stacks to the right and half to the left.

Available in a wide range of fabric styles and colours, each fabric is designed to meet stringent standards in light control, glare reduction and insulation from harmful UV rays.
