

VERTICAL
BLIND SYSTEM

Combining elegance with adaptability and energy efficiency, our Vertical Blind Systems are perfect for a vast range of applications requiring a translucent or room darkening effect over large spans.

Employing cutting-edge engineering, Vertilux Vertical Blinds glide to the lightest touch and are designed to provide optimum performance for spans up to 5800mm. These systems are ideal for large window design applications and sliding doors because of their style and practicality.

Their modern design and unique tracking system make controlling heat, light and privacy a breeze. When combined with the right fabric, they can suit a wide range of applications and offer durability and efficient solar protection.

Our Vertical Blind Systems have a wide range of draw types, making them incredibly versatile and can easily be stacked to the left, the right, split evenly or bunched at the centre, depending on your requirements.

Add your personal touch by selecting a translucent or room darkening fabric from our huge variety of colours. Whether you choose a subtle pattern or textured plain, these fabrics are specific in style to the needs of this system and designed to meet stringent standards in light control, glare reduction and insulation from harmful UV rays.

Lastly, our Vertical Blind operational components are high-moisture rated and come with a five-year warranty.
