Overview

Location: Highgate, SA
Architect: Russell Yelland
Product: Roller Blinds
System: Various
Qty: 87

“Concordia College’s redevelopment project involved upgrading its facilities to meet modern educational standards. Vertilux provided tailored window coverings, including BGS Roller Blinds, BGS Multilink Roller Blinds, Motorised Roller Blinds and OneBlinds.”

Objective

Concordia College sought a high performance fabric solution to enhance indoor air quality, requiring minimal maintenance, and aligned to the College’s design style. These fabrics needed to be versatile and durable enough to accommodate various spaces within the college while reflecting a commitment to sustainability.

The Solution

Our contribution to this visionary project extended beyond the bricks and mortar. In the pursuit of optimal functionality, we manufactured a custom solution featuring BGS Roller Blinds and BGS Multilink Roller Blinds in Administrative spaces, ensuring precise control over light and glare. Motorised Single and Double Roller Blinds were strategically placed in the Auditorium and Lecture Theatre, seamlessly integrating with AV/Audio systems to enable enhanced blind control.

In the realm of Science Labs, OneBlinds were coupled with side curtains to effectively eliminate external light sources to provide the controlled environment essential for scientific pursuits. Double BGS Roller Blinds with manual chain control were installed in the General Learning areas to offer immediate flexibility, while the Art Centre boasts Motorised Multilink Roller Blinds, harmonising aesthetics and functionality.
