“At 4 Parramatta Square, our sustainable window coverings provided a custom, energy-efficient solution that contributed to the building’s pursuit of a 6 Star Green Star rating, delivering premium, A-Grade office accommodation.”

Objective

The primary objective for 4 Parramatta Square was to deliver modern, sustainable, A-grade office accommodation that meets the highest standards of environmental performance, aiming to achieve a 6 Star Green Star rating. The project required innovative solutions that would enhance the building’s energy efficiency, occupant comfort, and overall functionality, all while maintaining a premium aesthetic.

The Solution

In alignment with 4 Parramatta Square’s goal of achieving a 6 Star Green Star rating, our window covering solution was specifically chosen to optimise light management and energy efficiency throughout the office spaces. The installation featured a combination of Manual and Motorised Roller Blinds, some with Headboxes and Guide Wires, to ensure precise light control and a sleek, modern appearance.

Additionally, we provided 30 Motorised Bottom-Up Roller Blinds in Fully Enclosed Kassetts with Conston Boxes to address the building’s unique architectural features, along with 3 Motorised Pleated Skylight Blinds for optimal daylight management. This comprehensive and sustainable solution not only supported the building’s environmental goals but also elevates the workspace to premium A-grade standards.
