Overview

Location:	Docklands, Melbourne VIC
Architect:	COX Architecture
Product:	Roller Blinds
System:	Manual, Motorised + Constant Tensioning Blind Systems
Qty:	628

“Supplying Responsible Window Coverings for this Project was an honour that aligns perfectly with our commitment to manufacturing sustainable solutions. For us, nothing is more important than providing an environment that fosters productive learning and growth for younger generations.”

Objective

One of the project’s main objectives was to encourage community engagement through shared and secure spaces, with the design strategy equally focused on minimising the environmental footprint of the building.

The Solution

Docklands Primary School stands as a pioneering project that reimagined the concept of urban education, adding a vital addition and catalyst to the precinct’s ongoing development. Within its innovative learning spaces, a combination of manual, motorised, and constant tensioned blind systems were integrated to facilitate flexible, student-centric environments. These systems enable effortless transitions between indoor and outdoor spaces to create an engaging learning environment and improved air quality.

These blinds not only enhance the school’s aesthetic appeal but also prioritise sustainability, energy efficiency, and natural light optimisation. By providing versatile shading solutions, ensures learning spaces are conducive to productivity, comfort, and growth for students and educators alike. This commitment to sustainable design aligns perfectly with our ethos and reinforces our dedication to creating environments that support learning and well-being.
