Overview

Location: Keswick, SA
Architect: Hames Sharley
Product: Roller Blinds
System: Manual BGS
Qty: 200

“Manufacturing and deploying 200 BGS Roller Blinds, that met sustainable guidelines, ensured optimal light control and privacy, while contributing to the efficient operation of emergency services to maintain a comfortable working environment for staff was of paramount importance to us”

Objective

SAFECOM Emergency Services in Adelaide required a solution that prioritised functionality and reliability along with meeting sustainability and environmental performance considerations that were paramount throughout the entire design, selection and building process to enable healthier and more resilient environment.

The Solution

The Emergency Services Sector Headquarters is a uniquely designed IL4 Command Centre that combines and improves responses to crisis situations by boosting the functionality, capability, and ultimately the integration of the four critical agencies. The new centre allows the CFS, MFS, SES and Safecom to occupy a single new fit-for-purpose facility. They function independently in standard daily operations, however, they are able to operate collectively in disaster management scenarios.

To align with SAFECOM's commitment to sustainability, we manufactured 200 BGS Roller Blinds for this project. Our window furnishings not only contributed to the overall aesthetics and indoor air quality of this working environment but also adhered to sustainable guidelines, reflecting SAFECOM's dedication to responsible practices.
