### Program Description

<b>EPD Scope</b>	Cradle to grave A1 to C4 + D as defined by EN 15804 [1]																		
<b>System boundary</b>	The system boundary with nature includes material and energy acquisition, processing, manufacture, transport, installation plus waste arising to end of life.																		
<b>Stages included</b>	Operations A1 to D3																		
<b>Stages excluded</b>	No operation was excluded but no flows arose in modules B4, B5, B6, B7 and C3.																		
<b>Information Modules</b>	Figure 1 depicts all modules being declared including some with zero results. Any module not declared (MND) does not indicate a zero result.																		
<b>Model Information</b>	<b>Actual</b>			<b>Scenarios</b>												<b>Potential</b>			
<b>Stages</b>	Building Life Cycle Assessment																		
<b>Modules</b>	Product			Construct		Use							End-of-Life				Benefit & load beyond system		
<b>Unit Operations</b>	A1	A2	A3	A4	A5	B1	B2	B3	B4	B5	B6	B7	C1	C2	C3	C4	D1	D2	D3
<b>Cradle to grave phases</b>	Resources	Transport	Manufacture	Transport	Construct	Use	Maintain	Repair	Replace	Refurbish	Energy use	Water use	Demolish	Transport	Process Waste	Disposal	Reuse	Recovery	Recycling

### Data Sources

<b>Primary Data</b>	Data is from primary sources 2017 to 2022 including the manufacturer and suppliers' standards, logistics, technology, market share, management system in accordance with EN ISO 14044:2006, 4.3.2 [4]. All are physically allocated not economically allocated.
<b>A1-A3 Stage inclusions</b>	Operations include all known raw material acquisition, refining and processing plus scrap or material reuse from prior systems; electricity generated from all sources with extraction, refining & transport plus secondary fuel energy and recovery processes. Also, transport to factory gate; manufacture of inputs, ancillary material, product, packaging, maintenance, replacement plus flows leaving at end-of-waste boundary and fates of all flows at end of life
<b>Variability</b>	Significant differences of average LCIA results are declared.
<b>Chemicals of Concern</b>	Contains no substances in the European Chemicals Agency "Authorised or Candidate Lists of Substances of Very High Concern (SVHCs)".

### Data Quality

Data cut-off & quality criteria complies with EN 15804 [1] The LCA used background data aged <10 years and quality parameters tabled below.

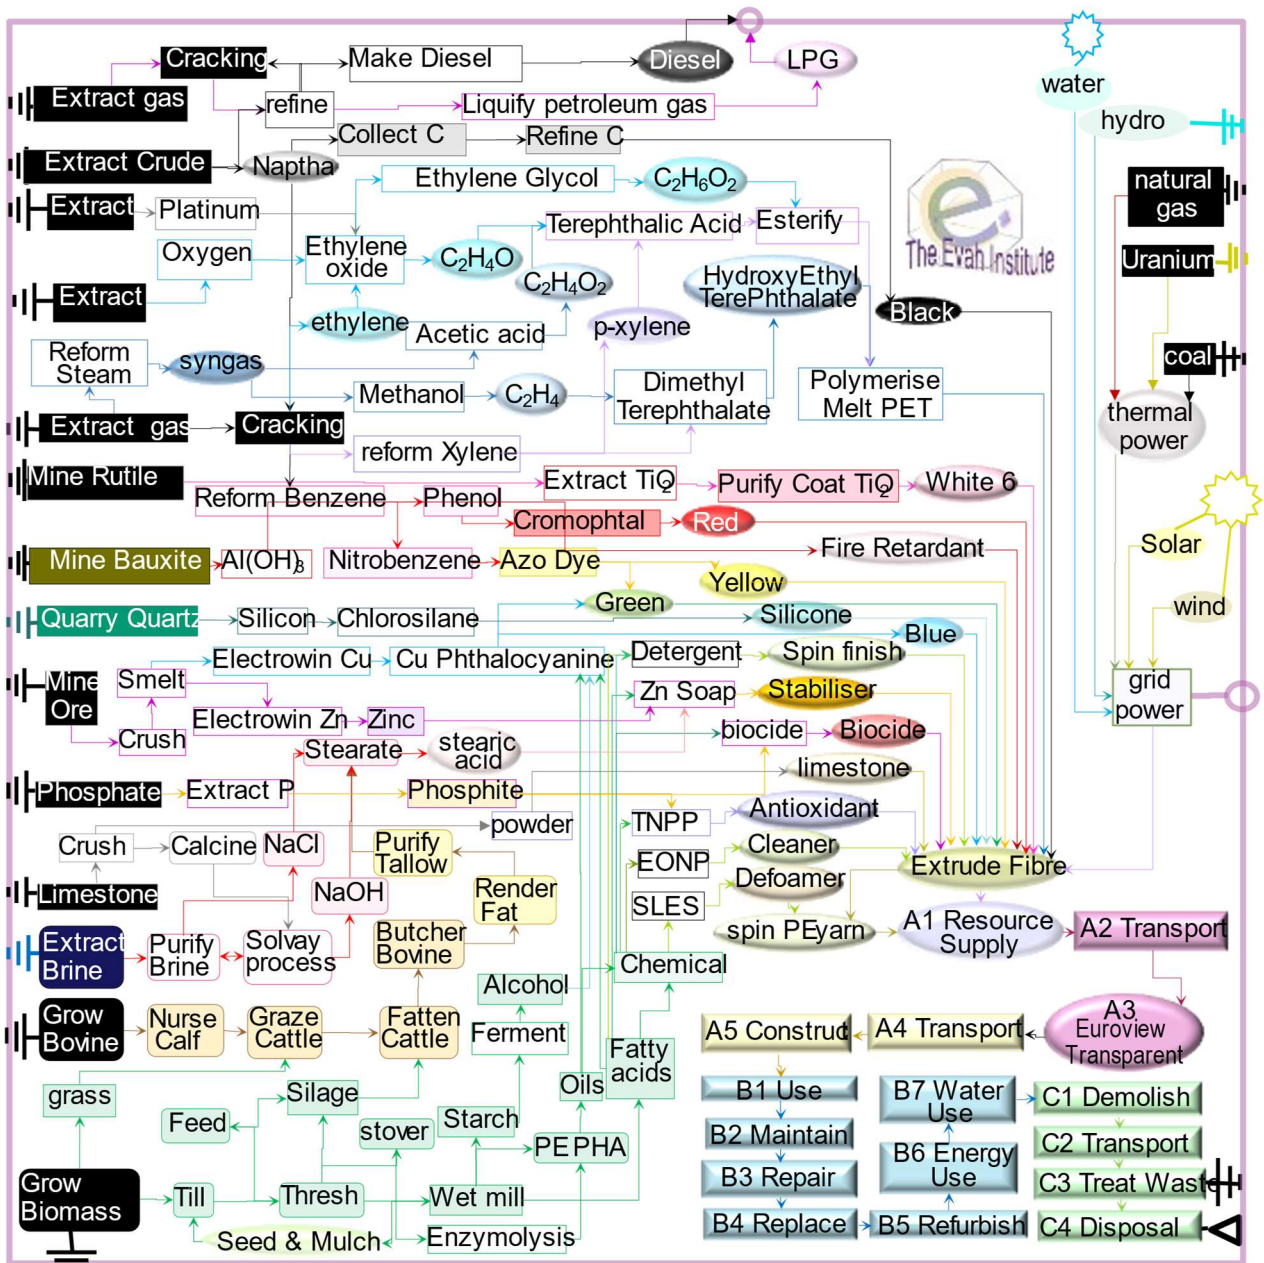

Background	Data Quality	Parameters and Uncertainty (U)			
<b>Correlation</b>	<b>Metric σ</b>	U ±0.01	U ±0.05	U ±0.10	U ±0.20
<b>Reliability</b>	<b>Reporting</b>	Site Audit	Expert verify	Region	Sector
	<b>Sample</b>	>66% trend	>25% trend	>10% batch	>5% batch
<b>Completion</b>	<b>Including</b>	>50%	>25%	>10%	>5%
	<b>Cut-off</b>	0.01%w/w	0.05%w/w	0.1%w/w	0.5%w/w
<b>Temporal</b>	<b>Data Age</b>	<3 years	≤5 years	<7.5 years	<10 years
	<b>Duration</b>	>3 years	<3 years	<2 years	1 year
<b>Technology</b>	<b>Typology</b>	Actual	Comparable	In Class	Convention
<b>Geography</b>	<b>Focus</b>	Process	Line	Plant	Corporate
	<b>Range</b>	Continent	Nation	Plant	Line
	<b>Jurisdiction</b>	Representation is Global. Africa, North America, Europe, Pacific Rim			

### System Analysis Scope and Boundaries

Stages A1 to 3 model actual operations. Stage A4 to C4 are model scenarios.

Typical scenarios are assumed to forecast unit operations as described in the next section.

Figure 2. shows included processes in a cradle to grave system boundary to end of life fates reuse, recycling, or landfill grave beyond the boundary.

**Figure 2. Product Process Flow Chart**

## Environmental Impact Terminology

Environmental impacts contributing to risks of social and ecological issues and collapse are tabled below with common names and remedies given for each indicator.

<p><b>Global warming forcing Climate Change</b></p>	<p>Greenhouse gases absorb infra-red radiation. This heat reduces thermal energy differentials, from equator to poles, forcing ocean current and wind circulation to blend and regulate climate. Weakly blended “lumpier” weather has more frequent, extreme heat wave, fire-storm, cyclone, rain-storm, flood and blizzard events. Accumulation of carbon dioxide, natural gas methane, nitrous oxides and volatile organic compounds from burning fossil fuels causes global warming. Forest and wilderness growth absorbing air-borne carbon in biomass can drawdown such accumulation. Urgent renewable energy reliance is vital in time to avoid imminent tipping points and the worsening “<b>climate emergency</b>”.</p>
<p><b>Ozone layer depletion</b></p>	<p>Stratospheric ozone loss weakens the planet’s solar shield so more shorter wavelength ultraviolet (UVB) light reaching earth damages plants and increases malignant melanoma and skin cancer in humans and animals. Chlorofluorocarbons, hydrochlorofluorocarbons (HCFC), chlorobromomethane, hydrobromofluorocarbons, carbon tetrachloride, methyl chloroform, methyl bromide and halon gas cause ozone layer loss. To repair the “<b>ozone hole</b>” reliance on ozone-safe refrigerants, aerosols and solvents is essential to avoid further its depletion and enable accumulation of naturally-formed ozone.</p>
<p><b>Acidification</b></p>	<p>Acidification reduces soil and waterway pH, impedes nitrogen fixation vital for plant growth and inhibits natural decomposition. It increases rates and incidence of fish kills, forest loss and deterioration of buildings and materials. Chief synthetic causes of “<b>acid rain</b>” are emissions of sulphur and nitrogen oxides, hydrochloric and hydrofluoric acids and ammonia from burning fossil fuels polluting precipitation of rain and snow world-wide.</p>
<p><b>Eutrophication of terrestrial, freshwater and marine life</b></p>	<p>Eutrophication from excessively high macronutrient levels added to natural waters promotes excessive plant growth that severely reduces oxygen, water and habitat security for aquatic and terrestrial organisms across related ecosystems. Chief synthetic cause of “<b>algal blooms</b>” is nitrogen (N, NO<sub>x</sub>, NH<sub>4</sub>) and phosphorus (P, PO<sub>4</sub><sup>3-</sup>) in rain run-off over-fertilised land catchments.</p>
<p><b>Photochemical ozone creation</b></p>	<p>Tropospheric photochemical ozone, called “<b>summer smog</b>” near ground level, is created from natural and synthetic compounds in UV sunlight. Low concentration smog damages vegetation and crops. High concentration smog is hazardous to human health. Chief synthetic causes are nitrogen oxides, carbon monoxide and volatile organic compounds (VOC) pollutants. Avoiding reliance on dirtiest coal fuel and volatile chemicals has reduced smog incidence in many areas globally.</p>
<p><b>Depletion of minerals, metals &amp; water</b></p>	<p>Abiotic depletion of finite mineral resources increases time, effort and money required to obtain more resources to the point of extinction of naturally viable reserves. This can limit access to available, valuable and scarce elements vital for human-life. The youth movement “<b>extinction rebellion</b>” calls on adults to secure climate, reserves and biodiversity for current and future generations.</p>
<p><b>Depletion of fossil fuel reserves</b></p>	<p>Abiotic depletion of resources by consuming finite oil, natural gas, coal and yellowcake fossil fuel reserves leaves current and future generations suffering limited available, accessible, plentiful, essential valuable as well as scarce raw material, medicinal, chemical, feedstock and fuel stock. Approaching “<b>peak oil</b>” acknowledged fossil fuel reserves are finite and the need for decision-makers to act to avoid market instability, insecurity and or oil and gas wars.</p>

## Glossary of Terms, Methods and Units

Acronyms, methods and units of impact potentials plus inventory inputs and outputs, are defined below

Impact Potentials	Acronym	Description of Methods	Units
Climate Change fossil	GWP <sub>ff</sub>	GWP fossil fuels [7]	kg CO <sub>2eq</sub>
Climate Change biogenic	GWP <sub>bio</sub>	GWP biogenic [7]	kg CO <sub>2eq</sub>
Climate Change land use	GWP <sub>luluc</sub>	GWP land use & change [7]	kg CO <sub>2eq</sub>
Climate Change total	GWP <sub>t</sub>	Global Warming Potential [7]	kg CO <sub>2eq</sub>
Stratospheric Ozone Depletion	ODP	Stratospheric Ozone Loss [8]	kg CFC <sub>11eq</sub>
Photochemical Ozone Creation	POCP	Summer Smog [9]	kg NMOC <sub>eq</sub>
Acidification Potential	AP	Accumulated Exceedance [10]	mol H <sup>+</sup> <sub>eq</sub>
Eutrophication Freshwater	EP <sub>fresh</sub>	Excess nutrients freshwater [11]	kg P <sub>eq</sub>
Eutrophication Marine	EP <sub>marine</sub>	Excess marine nutrients [11]	kg N <sub>eq</sub>
Eutrophication Terrestrial	EP <sub>land</sub>	Excess Terrestrial nutrients [11]	mol N <sub>eq</sub>
Mineral & Metal Depletion	ADP <sub>min</sub>	Abiotic Depletion minerals [12]	kg Sb <sub>eq</sub>
Fossil Fuel Depletion	ADP <sub>ff</sub>	Abiotic Depletion fossil fuel [13]	MJ <sub>ncv</sub>
Water Depletion	WDP	Water Deprivation Scarcity [14, 15]	m <sup>3</sup> <sub>WDP eq</sub>
Fresh Water Net	FW	Lake, river, well & town water	m <sup>3</sup>
Secondary Material	SM	Post-consumer recycled (PCR)	kg
Secondary Renewable Fuel	RSF	PCR biomass burnt	MJ <sub>ncv</sub>
Primary Energy Renewable Material	PERM	Biomass retained material	MJ <sub>ncv</sub>
Primary Energy Renewable Not Feedstock	PERE	biomass fuels burnt	MJ <sub>ncv</sub>
Primary Energy Renewable Total	PERT	Biomass burnt + retained	MJ <sub>ncv</sub>
Secondary Non-renewable Fuel	NRSF	PCR fossil-fuels burnt	MJ <sub>ncv</sub>
Primary Energy Non-renewable Material	PENRM	Fossil feedstock retained	MJ <sub>ncv</sub>
Primary Energy Non-renewable Not Feedstock	PENRE	fossil-fuel used or burnt	MJ <sub>ncv</sub>
Primary Energy Non-renewable Total	PENRT	Fossil feedstock & fuel use	MJ <sub>ncv</sub>
Hazardous Waste Disposed	HWD	Reprocessed to contain risks	kg
Non-hazardous Waste Disposed	NHWD	Municipal landfill facility waste	kg
Radioactive Waste Disposed	RWD	Mostly ex nuclear power stations	kg
Components For Reuse	CRU	Product scrap for reuse as is	kg
Material For Recycling	MFR	Factory scrap to remanufacture	kg
Material For Energy Recovery	MER	Factory scrap use as fuel	kg
Exported Energy Electrical	EEE	Uncommon for building products	MJ <sub>ncv</sub>
Exported Energy Thermal	EET	Uncommon for building products	MJ <sub>ncv</sub>

## Product Information

This section provides data required to calculate assessment results factoring different mass and periods.

<b>Brand Name &amp; Code</b>	Euroview® Transparent
<b>Range Names</b>	Transparent blind fabric
<b>Factory warranty</b>	7 years internal use only
<b>Manufacturer, site address &amp; site representation</b>	Textile cutting and dispatch by Verotex AG, Germany 95236 Stammbach. Dyeing: Textilveredlung Drechsel GmbH Lohmuehle 1 Germany95100 Selb. Fabric: SR Webatex GmbH Tunnelstr. 6 Germany-95448 Bayreuth.
<b>Application</b>	Window Coverings
<b>Function in Building</b>	Glare and light control designed for interior dry areas of all buildings
<b>Declared unit</b>	1 kg 0.38mm thick 3m wide Euroview™ Transparent 130 grams/m <sup>2</sup> blind fabric
<b>Functional unit</b>	20 years use of a kilogram of Euroview™ Transparent blind fabric

## Product Components

This section summarises factory components, functions, source nation and % mass share. In product content listed below the % mass has a ±5% range and a confidence interval that is 90% certain to contain true population means at any time. Listing such 90±5% certainty considers normal resource acquisition, supply chain, sedimentation, seasonal, manufacturing and product colour variation over this EPD's 5-year validity period. This also allows for intellectual property protection whilst ensuring fullest possible transparency.

Function	Component	Source	Amount
<b>Fabric</b>	Polyester	Germany	>89 <91
<b>White pigment</b>	Titanium Dioxide	Europe	>3.6 <4.0
<b>Vehicle</b>	Melamine copolymer	Europe	>3.1 <3.2
<b>Colours &amp; black</b>	Organic pigment	Germany	>1.3<1.4
<b>Plasticiser</b>	Diocetyl phthalate	Germany	>1.2 <1.3
<b>Solubiliser</b>	C9 & C10 fatty acids	Global	>1.2 <1.3
<b>Antioxidant</b>	Dimethylheptan3yl phenol	Europe	>1.2 <1.3
<b>Fire retarder</b>	Nonyl Phenyl Phosphite	Europe	>0.3 <0.5
<b>Biocide</b>	Nano Silver	Global	>0.1<0.2
<b>Packing</b>			
<b>Forms &amp; packing</b>	Cardboard and paper	Germany	>20 <28
<b>Caps &amp; wrapping</b>	Polyethylene	Germany	>0.5 <0.7
<b>Pallets</b>	Wood	Germany	>0.5 <0.6
<b>Strapping</b>	Polypropylene	Germany	>0.2 <0.4

## Product Functional & Technical Performance Information

This section provides manufacturer specifications and additional information

<b>Specifications</b>	<a href="https://www.vertilux.com.au/blind_fabrics/euroview-transparent/">https://www.vertilux.com.au/blind_fabrics/euroview-transparent/</a>
<b>Practices Reference</b>	<a href="http://www.vertilux.com.au/materials/blind-fabrics">http://www.vertilux.com.au/materials/blind-fabrics</a>
<b>Installation Process</b>	<a href="http://www.blindsinstallationguide.com.au">http://www.blindsinstallationguide.com.au</a>
<b>Practicality</b>	A transparent open weave high quality 100% Trevira CS fabric designed to reduce light glare and harmful UV rays.
<b>Fire Classification</b>	AWTA AS1530.2 1993, AWTA AS1530.3 1993, AWTA AS3837 1998, German Standard DIN 4102 – B1 and French Standard: M1
<b>Emissions</b>	Volatile Organic Compound (VOC) ASTM D5116 and 100% Trevira CS Free of PVC, Formaldehyde and Halogen
<b>Durability</b>	Oeko-Tex Certified DIN EN ISO 105 B2: 6 - 7 Excellent Lightfastness 5+

## Scenarios for Modules

This section defines modelling stages scenarios A4 to D3 beyond actual operations in module A1 to A3.

<b>A4 Transport to Site</b>	<b>Type specified</b>	<b>Amount</b>	<b>Type specified</b>	<b>Amount</b>
Intercity road trucking	2t to 5t vans	220 km	85% Capacity	Full back load
Long distance road trucking	25t semi-trailer	600 km	85% Capacity	Full back load
Continental freight rail	Diesel train	600 km	85% Capacity	Full back load
Global container shipping	Factory to CBD	1,200km	85% Capacity	Full back load
Volume capacity (<1 to ≥1)	Utilisation factor	1	Uncompressed	Un-nested
<b>A5 Installation</b>				
Utilities used	Grid Power	0.0042MJ	Town water	Nil
Emissions	VOCs indoors	Nil		
Waste on site	Scrap Trim	5%	Scrap Fate	Landfill
Emissions	From landfill	All known		
Collection	Council site bins	0.05 kg	Landfill route	50km no return
All packaging	As declared	kg	Energy recovery	nil
Pack waste collection	Council site bins	0.0004kg	Landfill route	50km no return
Pack scrap recycled	Council site bins	0.003kg	To Recycler	50km no return

Modules B1 Use of building fabric, B4 Replacement, B5 Refurbishment, B6 Operating Energy and B7 Operating Water each have zero flows. Scenarios for Building B2 and B3 are listed below.

<b>2 Maintenance</b>	<b>Type specified</b>	<b>Amount</b>	<b>Type specified</b>	<b>Amount</b>
Maker's specified process	URL declared	Specified	Clean cycle	Annual
Vacuum cleaning energy	Annually	0.007MJpa	Power mix	National grid
<b>B3 Repair</b>	Damaged	5%	Maker's process	As per website
New Product	As manufactured	5%	Freight to site	5% A5
Scrap	Fate landfill	0.025kg	Recycling	0.025kg
Energy input & source	No excess	Nil	Packaging	5% A5

Module C3 Waste Treatment has zero flows. End of Life scenarios C1, C2 and C4 are listed below.

<b>C1 Demolition</b>	<b>Type specified</b>	<b>Amount</b>	<b>Type specified</b>	<b>Amount</b>
Operation	remove damaged	5%	Collection	Separate
Collection process	In site waste	5%	Separate to reuse	0
<b>C2 Transport</b>	25t truck road	50km	85% capacity	No back load
<b>C4 Disposal</b>	Product specific	0.025kg	Collect separately	0.025kg
Typical Scenario	Damaged to landfill	2.5%	All emissions	mass share
Recovery system	Recycling	2.5% kg	Not for energy	0.0 kg

Scenarios for modules D1Reuse, D2 Recovery and D3 Recycling are listed below.

## D Beyond System Boundary

<b>D1 Reuse</b>	<b>Type specified</b>	<b>Amount</b>	<b>Type specified</b>	<b>Amount</b>
Typical performance	Fit for purpose	95%	Reuse in place	0.95kg
<b>D2 Recovery</b>	Surface Vacuum	95%	Clean in place	0.95kg
<b>D3 Recycle</b>	Take back	2.5%	Clean fibre	0.025kg

### Module A1 to A5 Results

Table 1 shows results from A1 Resources, A2 Transport, A3 Manufacture, A4 Transport to A5 Construction.

**Table 1 A1-3 to A5 Impact & Inventory Results/Functional Unit**

Result	A1-3	A4	A5
Climate Change biogenic	-1.3	0	-6.2E-02
Climate Change luluc	2.4E-04	2.8E-09	01.1E-05

### Module D1 to D4 Results Beyond System Boundaries

Table 4 shows results Beyond System Boundaries for phases D1 Reuse, D2 Recovery to D3 Recycle.

**Table 4 D1 to D4 Impact & Inventory Results/Functional Unit**

Result	D1	D2	D3
Climate Change biogenic	-0.168	-2.0E-05	-4.3E-07
Climate Change luluc	0.196	2.4E-09	0
Climate Change fossil	0.96	0	0.1
Climate Change total	0.94	0	0.1
Stratospheric Ozone Depletion	1.3E-08	5.9E-13	1.8E-09
Photochemical Ozone Creation	3.8E-03	1.2E-06	5.0E-04
Acidification Potential	1.7E-03	5.2E-07	2.8E-04
Eutrophication Freshwater	1.3E-07	1.2E-10	5.0E-09
Eutrophication Marine	3.8E-04	9.4E-08	6.0E-05
Eutrophication Terrestrial	9.2E-04	6.9E-07	1.7E-04
Fossil Depletion	2.0E-04	1.7E-04	0.09
Mineral and Metal Depletion	0.80	5.8E-08	3.3E-05
Water Scarcity Depletion	4.6E-02	1.8E-05	1.3E-03
Net Fresh Water Use	0.28	1.1E-01	7.7
Secondary Material	0.36	1.7E-04	0.03
Secondary Renewable Fuel	0.5	4.3E-05	1.3E-03
Primary Renewable Material	0.01	3.0E-05	3.3E-03
Primary Energy Renewable Not Feedstock	3.0	1.4E-04	0.14
Primary Energy Renewable Total	3.0	1.7E-04	0.14
Secondary Non-renewable Fuel	0.22	7.7E-06	1.3E-03
Primary Energy Non-renewable Material	13	0	0.11
Primary Non-renewable Energy Not Feedstock	35	0	1.43
Primary Energy Non-renewable Total	48	3.1E-03	1.53
Hazardous Waste Disposed	7.2E-04	1.9E-07	1.1E-04
Non-hazardous Waste Disposed	0.098	2.0E-05	0.01
Radioactive Waste Disposed	2.2E-16	5.0E-21	3.3E-17
Components For Reuse	0	0	0
Material For Recycling	3.6E-03	1.6E-05	5.0E-04
Material For Energy Recovery	6.4E-05	6.5E-09	2.5E-06
Exported Energy Electrical	0	0	0
Exported Energy Thermal	0	0	0

**Interpretation**

This interpretation discusses product results cradle to grave.

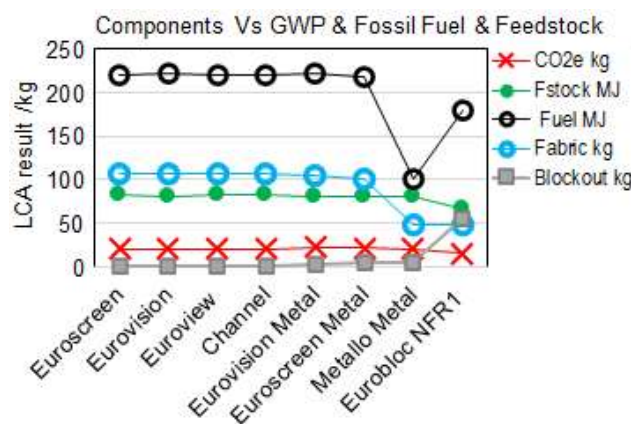

Table 5 lists A1 to A3 Polyester fabric and acrylic block-out component mass /kg **product**.

Figure 3 shows A1 to A3 GWP results most sensitive to Polyester fabric and least to acrylic block-out content.

Figure 4 shows A1 to A3 Acidification (AP), Marine Eutrophication (EP<sub>Mar</sub>) and Terrestrial (EP<sub>Terra</sub>) results /kg product most sensitive to Polyester content.

**Table 5 Component A1-A3/kg**

	Fabric	Block
Eurobloc NFR1	47.3	56.2
Euroscreen Metal	100.7	5.0
Metallo Metallised	47.3	5.0
Eurovision Metal	103.9	2.2
Euroview	106.5	0
Channel	106.5	0
Eurovision	106.7	0
Euroscreen	106.8	0

**Figure 3 A1-A3 Component & EE% share//kg**

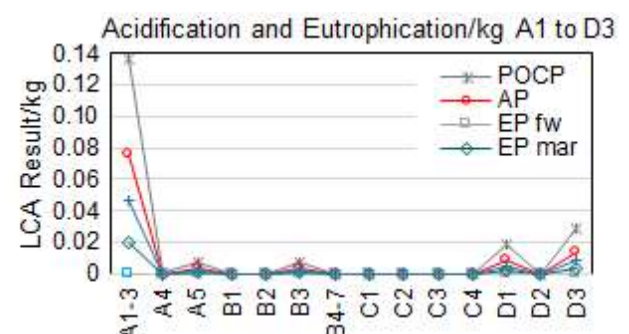

**Figure 4 A1-A3 GWP Vs ADP FF/kg A1 to D3**

Figure 5 shows GWP, Abiotic Depletion of Fossil Fuel (ADP FF) /kg product and Figure 6 shows Photochemical Smog (POCP), AP, EP<sub>Mar</sub> and GWP/kg.

Both show most damage from A1-A3 and other phases are insignificant, until D3 and D1 beyond the system boundary.

**Figure 5 GWP Vs ADPFF /kg A1 to C4**

**Figure 6 POCP, AP & EP/kg A1 to C4**

Module D Beyond System Boundary results show typical D1 Reuse of 95% of intact product for 40 more years reduces all impacts >95%/kg for a 60-year building life with the 5% of the same new product.

Subsequently as most remain unchanged over built life no significant damages arise for phases A4 to C4.
