## vertilux MADISON TWO<sup>TM</sup> Room Darkening

## Why MADISON TWO™ Room Darkening?

The Vertilux Madison Two™ fabric range is made from a high quality 100% Polyester with acrylic foam backing. With superior heat and reflection properties it assists in maintaining an energy efficient environment. Madison Two™ does not allow light into the room, giving total privacy. Woven to a fine fabric weave with just a glimpse of lustre giving it a stylish, contemporary look. Available in a range of colours that coordinate well with other Vertilux fabric ranges and can be used with the Vertilux Roller Blind, Roman Blind or Panel Glide Systems.

## NOTE:

All fabrics in the Madison Two range have a VLT of zero, regardless of the colour. The VLT only differs in light filtering fabrics. The solar optical properties mostly affected by the colour of the backing are the Solar Reflectance and Solar Absorbance. The reason being is that lighter colours reflect light while darker colours absorb light.

This is evident from the test results in our tech data showing that the two colours with a white back (Ghost and Licorice) have a much higher reflectance than the darker backed colour (Knight with Grey Back). You can also see that the solar absorbance of the Knight with Grey Back is much higher than that of the Ghost and Licorice with White Back fabrics.
